The 7-point gumOPEN AIR BAND CONCERTS
WILL SOON CLOSENOTWITHSTANDING COOLNESS OF
ATMOSPHERE LAST NIGHT,
LARGE CROWD WAS OUT

Despite the fact that the evening was one of the coolest of the season, and it seemed doubtful during the early part of the day as to whether the weather would permit an open air concert, yet so much are the Booster band concerts enjoyed and appreciated, that more than a thousand people gathered at the east side of the federal building last night to listen to another one of the splendid concerts.

As usual, a high class concert was given, and the program arranged by Prof. Ryan, director of the band, was rendered in a manner that was thoroughly appreciated by the crowd present. Among the selections rendered was one taken from "Piano," and contained parts that were exceedingly difficult, and was rendered in a creditable manner. Another selection of interest was that of "Teddy's Trombone," in which the slide trombone played a prominent part.

The Booster band is a splendid asset to the city, and the excellent concerts that have been given this summer, have been a source of great pleasure to the citizens, and music lovers of the city, and it is to be regretted that the weather will soon make it necessary to abandon the outdoor concerts, although the Young Men's booster club is considering the plan of continuing the concerts indoors, if the proper arrangements can be made. The next concert of the band will be given next Wednesday evening, Oct. 6th, which is the night of the fall fashion display, and the opening of the Federal building to the public.

MIDSHIPMAN SUSPENDED
ON HAZING CHARGE

(By Associated Press.)

Washington, Oct. 1.—The dismissal of six midshipmen, the suspension of four others for one year and the demotion of one to the lowest class of fifteen others was announced by Secretary Daniels today, as a result of recent hazing investigations at Annapolis.

WOMAN KILLS MAN WHO
HAD HARRASSED HER

Stubbenville, Ohio, Oct. 1.—Domenico Poprasse, aged 35, of Hillsville, Pa. was shot and instantly killed in the street here. It is alleged by Sofia Gallio, who fired a revolver bullet into his back. The woman says she did it because Poprasse came here to prevent her, a divorcee, from residing with Poprasse's brother-in-law, Nicola Tirvasi. She was arrested on a murder charge.

UNCLE SAM MAKING
TORPEDO PROOF SHIPS

Washington, Oct. 1.—Plans of the two new 32,000-ton superdreadnoughts are being closely guarded by navy department officials as they include new ideas as to defense against torpedo attack. It is understood that the experiments with floating caissons, begun immediately after the effectiveness of submarines was demonstrated in the European war, have thrown light upon the problem of guarding ships' bottoms from torpedo attacks and that provision has been made in the plans for the new vessels for greater subdivision and possibly for a degree of armor over vital parts.

The new ships virtually will duplicate the California class in appearance. They will have the clipper bow adopted for the California, carrying twelve 14-inch guns mounted three to a turret, and will make twenty and one-half knots an hour. In size the ships will be the maximum that can pass through the Panama Canal, 649 feet in length and ninety-seven in beam.

UNCLE SAM WILL BUILD
SIX TEEN SUBMARINES

Washington, D. C., Oct. 1.—Bids for building 16 submarines authorized by the last congress were opened today, the Union Iron Works, San Francisco, and the Electric Torpedo Boat company, Quincy, Mass., submitting the lowest offers for the Pacific and Atlantic coasts, respectively. The San Francisco concern bid for five or more at \$510,000 each, the first to be completed in 12 months and two each month thereafter. The Massachusetts company, bid for eight or more at \$533,000, the first to be completed within 17 months.

The fee-splitting doctor and the ambulance-chasing lawyer are about on a par. The former takes your case, not to the most competent specialist, but to one who will split the fee with him. The laborer's compensation act has put the latter out of business. When you meet with an accident he would run down the ambulance in order to get to file a damage suit for you. He was usually willing to split the amount recovered.

Will Help College Men

Earl H. Babst.

Earl H. Babst, new president of the Michigan Student Union, has gone into an extensive plan to help college students at Ann Arbor. He has become active in the plan of the Michigan Students Union to put up a building to cost \$750,000 for the union.

Alumni of the University of Michigan propose to build a \$1,000,000 "machine" for turning out a better type of manhood. This machine will be the home of the Michigan Student Union, an organization which has its ideal the thorough democratizing of the 6,300 students at Ann Arbor. To do this the alumni will begin an active campaign next month to raise

the money with which to erect and equip a building for about \$750,000 and leave an endowment fund of \$250,000 to extend the work of the union.

The Michigan Student Union was founded ten years ago and has shown that it is living up to the ideals of the founders.

EMPEROR'S METALS ARE
SIEZED FOR BULLETS

Geneva, Switz., Oct. 1.—(Via Paris.)—The Emperor's palace in Berlin was visited yesterday by the commission having in charge the seizure of metals for government use and a list of the metals at the court was demanded. The court chamberlain ordered all the members of the royal family to make individual lists.

By the orders of Emperor William, all metals not in actual use will be seized.

AIRMEN IN FRANCE
FLY IN FLOCKS

Budapest, Oct. 1.—Some details of the mode of operations of the French aviators on the western front are given in a letter from a Hungarian aviator serving with the German armies in France.

"The French airmen," he writes, "now fly usually in flocks or squads of considerable strength, both for reconnaissance purposes and for attacking our aviators who are on reconnaissance duty. As the French possess a large number of machines and block our way systematically, we have had to follow their example. Some pitched battles between comparatively large fleets of aeroplanes are thus among the possibilities of the immediate future.

"When the French desire to prevent us from carrying out a reconnaissance, a dozen aeroplanes ascend to a height of 6,000 feet and patrol our line. An equal number rise to 9,000 and fly along our front, taking the opposite direction from the first group. Should one of our machines attempt to pass through the meshes of this net, the two French aviators who happen to be nearest attack it simultaneously, one from above, and the other from below. If that is not sufficient, two or

more others fly to their assistance."

The French adopt similar methods when they bombard our aviation centers, railway stations and camps. The French air service is organized into

what they call squadrons, which is machine which leads the way, a few thoroughly practiced in maneuvering together like a fleet at sea. In an attack on a German land position, the bomb-carrying machines. The squad consists of a very powerful is handled very skillfully."
